

# BusDue High-Order Test Defect Log

CS408

**Team 20:** Heng Li, Yiyang Zhou, Yibin Wu, Ketao Chang, Weichu Hu

Defect No.	Defect Description	Defect Severity	Type of High Order Test	Test Case No. or Description
1	After setting the preference to walk, It can not be switched back to bus	2	Usability Test	Import CSV file, switch preference to walk. Then try to switch back to bus
2	The user cannot see the exact bus number and bus stop on the map so the user cannot see where and which bus to ride	2	Usability Test	Import CSV file, then the bus route will be shown
3	The “walk” preference routine does not start from current location, is not the shortest routine and is almost identical to bus preference	2	Usability Test	Import CSV file, then click on “Walk” Button
4	The UniTest schedule is not updated automatically after dropped or add class	3	Function Test	The CSV file has to be imported every time the application starts. So it will not be updated automatically. We cannot test it as we cannot add or drop class for this semester
5	The user cannot see which class each pin represents. It will be really confusing for users.	3	Usability Test	Import CSV file, then the classes will be shown as multiple pins on the map
6	Log In only allows user to download CSV. It does not store any user information. User has to	3	Usability Test	User has to manually import CSV file every time

	import CSV file manually every time the program start			
7	The website is supposed to show top 7 classes with highest attendance, but on the website, the class with the highest attendance is shown for 7 days	2	Function Test	Open the website. On the left bottom corner, class of the highest attendance is shown for seven days.
8	The program does not show the time section for each class. So if there is a class that has two different sections in the same classroom but not the same time, the user cannot determine which one the correct class section for him	2	Usability Test	Import CSV, and then a list of classes will be shown.
9	Using user tag to visit the attendance detail page, the attendance displayed will be repeated. User will have to refresh to get the correct display.	2	Usability Test	Visit user's attendance detail page.
10	After adding attendance in /test page, the date of data displayed in user page will be 1month and 1 day earlier than the actual date.	2	Function Test	Add attendance in /test page, then visit user's attendance detail page.
11	Today's attendance percentage displays incorrectly.	2	Usability Test	Visit home page and see the graph for today's attendance.
12	When the map is launched, the current button on the right corner is covered by course selection menu. The user's can't quickly back to current location is they	3	Usability Test	Import CSV file, then select certain course and click "Walk" / Other functions which requires google map display.

	messed up with map.			
13	After import the CSV file, the course content under the selection bar are incorrect.	2	Function Test	Import CSV file, then click selection bar on the top. The content does not match the CSV file.
14	After import the CSV file, the course on the website would not be updated.	2	Function Test	Import CSV file, then visit the website, click classes.
15	On the website, there's no login verification step for administrator. Everyone can find user's attendance information if they have the url which can not protect user privacy.	1	Security Test	Enter the url and visit home page.
